Executive Summary

Title: The Naval Aviation Enterprise Type/Model/Series Team and its Effect on AH-1W Readiness

Author: Major Kevin Karl Kuginskie, United States Marine Corps

Thesis: Through empowering the AH-1W readiness stakeholders with a holistic approach to aviation readiness, Naval Aviation Enterprise (NAE) created a positive effect on AH-1W readiness.

Discussion: With the reduction of the military budget, it becomes imperative that the military remain efficient in maintaining its combat readiness. The reduction of funding forces the military to become smarter in the management of its programs. NAE manages the readiness of Naval Aviation. Through their AIRSpeed process, NAE is able to effect change from the status quo. The basis of the AIRSpeed process comes from the synthesis of three proven private industry standards: Lean, Six Sigma and Theory of Constraints. By applying these principles, the readiness process can continuously improve and efficiency will increase. Even though only introduced three years ago, the AH-1W program demonstrates what the process can accomplish.

Conclusion: Prior to NAE management of AH-1W readiness, a disjointed effort to increase readiness existed. By incorporating maintainer, aircraft and aircrew readiness with the supporting establishment into a process managed by the stakeholders, NAE created a holistic process that has a positive effect on AH-1W readiness.

Preface

The impetus for choosing Naval Aviation Enterprise Current Readiness as my MMS topic was from the frustration I experienced as a squadron operations officer generating the monthly Aircrew Core Competency reports. I believed that the reports would not institute change, but were merely an additional reporting requirement. I wanted to garner a better understanding of the NAE process and discover if the manpower required to generate the monthly reports for both operations and maintenance was worth the effort. Through the course of my research, I found that NAE, while not perfect, is a process that created a direct, positive effect on not only AH-1W readiness, but across all of Naval Aviation.

This paper assumes that the reader, as was I prior to my research, possesses a minimal understanding of the whole Current Readiness process. The paper provides a background into NAE and analyzes both the aircraft readiness trends over the last ten years and the maintainer/aircrew readiness over the last three years. My goal for the paper is to explain how the NAE process works and provide specific examples of the effect the process had on AH-1W readiness.

Introduction

With the reduction of the military budget, it becomes imperative that the military remains efficient in maintaining its combat readiness in a fiscally constrained environment. Reductions in funding will force the military to seek ways to decrease expenditures while maintaining their current capabilities. The future of military readiness will rely on effective program management to maintain a viable force. Currently, the Navy and Marine Corps rely on Naval Aviation Enterprise (NAE) and the AIRSpeed process to manage their aviation readiness. NAE, a branch under the Commander Naval Air Forces (CNAF), developed the AIRSpeed process in the late 1990s and early 2000s. The process successfully increased Navy pilot production rates and Naval Carrier Air Wing readiness. The Navy experienced numerous successes with the AIRSpeed process, such as the reduction of EA-6B engine repair cycle-time from 468 hours to 233 hours¹ and the reduction of the F/A-18 engine repair time by 26 days.²

Adopted at intermediate level maintenance facilities by the Marine Corps in 2006 and introduced operationally to the AH-1W in 2008, the question arose whether the Marine Corps would experience the same successes as the Navy. Has the manpower and budget spent on the process been a worthwhile venture, or was the expended time and money a wasted effort? The answer to that question lies in a quantitative analysis and qualitative assessment of the Naval Aviation Enterprise's AH-1W Type/Model/Series (T/M/S) Team as to AH-1W readiness. Through empowering the AH-1W readiness stakeholders with a holistic approach to aviation readiness, NAE created a positive effect on AH-1W readiness.

Background

NAE began in August 2001 as the Naval Aviation Readiness Integrated Improvement Program (NAVRIP) as an effort to improve pilot production, maintainer readiness, aircraft

readiness and to streamline the supply system. When initially created, only Navy units between deployments fell under NAVRIIP, but the system expanded to cover deployed Navy units in January 2004. In 2006, NAVRIIP established cross functional teams and was renamed the Current Readiness (CR) Cross Functional Team (CFT). Upon the re-designation, NAE expanded from only assisting Navy Aviation to including Marine Aviation.³ NAE established the AH-1W CFT in October 2008.⁴

Problem Defined

The key measurements that affect military spending for procurement and spare parts are the Mission Capable (MC), also referred to as Partial Mission Capable (PMC), and Full Mission Capable (FMC), rates of aircraft. A PMC aircraft is defined as an aircraft that is safe to fly but is unable to accomplish all its assigned missions due to a failed system. For example, if an aircraft is operational with the exception of the AIM-9 missile system, it would be assigned as an “I-coded” aircraft and would be designated PMC. See Appendix A for a full description of PMC designators. An FMC aircraft is an aircraft capable of performing any assigned mission. The standard rate for the AH-1W is 85% of the squadrons aircraft are MC and 75% are FMC.⁵

Lower than expected aircraft readiness was not just a product of increased utilization in support of Operation IRAQI FREEDOM and Operation ENDURING FREEDOM. The decreased readiness was due to a systemic problem with the process and structure of the AH-1W readiness program. Throughout Naval Aviation, a main source of failure was the overreliance on cannibalization, or taking parts from one aircraft to repair another, to meet the MC rates. If a squadron did not have the required parts on hand, they would cannibalize their aircraft to increase readiness.⁶ A 2001 General Accounting Office (GAO) report about cannibalization stated:

Cannibalizations have several adverse impacts. They increase maintenance costs by increasing workloads, may affect morale and the retention of personnel, and sometimes result in the unavailability of expensive aircraft for long periods of time. Cannibalizations can also create unnecessary mechanical problems for maintenance personnel. As shown by a recent survey, over half of all aircraft maintenance personnel work more than 50 hours a week (some work 70 hours or more) compared with the average of 40 hours. A Navy study notes that the additional work generated by cannibalizations adversely affects morale and lowers reenlistment rates.⁷

The process of cannibalization created inefficiency in the system and increased maintenance costs. In 2000, the Navy found that Naval Aviation costs were increasing 8 to 14 percent per year without a correlating increase in readiness. Without an improvement to the process, costs would continue to rise without an appreciable gain to readiness.⁸

An April 2003 GAO report noted that there was no set standard that defined what those rates should be and that the readiness rates were chosen arbitrarily, without justification for their rates. The GAO reported that "...the Navy further explained that it believed that the MC goals were established in the early 1980s 'to be in line with the reported status quo for the day' with 'no analytical rigor applied at the time of their birth.'"⁹ Additionally, the report found that there was not a requirement to designate an office for assessing aircraft readiness rates. The 2003 GAO report recommendation to the services was to:

[D]etermine whether different types of aircraft availability goals are needed... validate the basis for the existing MC and FMC goals, and revise DOD Instruction 3110.5 to clearly define the specific aircraft availability goals required;... establish a standard methodology identifying objective principles of analysis;... and require each service to identify one office to act as a focal point for coordinating the development of the goals...¹⁰

The high tempo of operations in Iraq and Afghanistan exacerbated the problem of AH-1W readiness due to the aircraft operating at more than double the programmed flight hours.¹¹ As seen in Figure 1, AH-1W mission readiness rates had not reached their assigned goal and were trending downward with the stresses of combat operations. The GAO report in October 2005

identified the AH-1W as having “a problem or issue that warrants attention by DOD, the military services, and/or Congress, and if left unattended may worsen.”¹² The report recommended a reassessment at “the near- and long-term program strategies for sustaining and modernizing key equipment to ensure that the plans for those items that are needed to meet future defense capabilities...”¹³ The Department of the Navy used NAE to meet this recommendation.

Figure 1: Readiness Rates from October 2005 GAO Report¹⁴

To help understand the affect NAE has had on AH-1W readiness, a basic understanding of readiness and NAE is required. This next section provides an outline of the defense readiness system and explains the basics of the NAE Current Readiness process.

Readiness Defined

MCO 3000.13 defines readiness as “the ability of U.S. military forces to fight and meet the demands of the national military strategy.”¹⁵ Each unit, in this case a squadron, has a specified Mission Essential Task List (METL). The METLs define the tasks that a squadron

must be ready to execute. Every squadron is required to maintain both currency and proficiency in the performance of these tasks. The Marine Corps tracks its subordinate units' readiness through an electronic database called the Defense Readiness Reporting System (DRRS). At least monthly, all operational active duty Marine Corps units submit a report on the status of their personnel (P-Level), equipment supply (S-Level), equipment readiness (R-Level) and training (T-Level) to Headquarters, Marine Corps. Each of these levels is assigned a numeric value between 1 and 5 that corresponds with a specific percentage (Refer to Appendix B for specific percentages). A higher number means the unit has lower readiness for that section. The unit's core level (C-Level) corresponds to the lowest readiness rating of the four categories.¹⁶

Squadrons are required to deploy at a C-1 level and non-deploying units are required to maintain a C-2 level. Since DRRS is only a reporting tool, it does not assess how a squadron can improve their readiness rates. The reduction in the military budget combined with the requirement to maintain readiness provided NAE with an opportunity to assist the Marine Corps through the AIRSpeed process.

Concepts of Naval Aviation Enterprise

The basis of the NAE process comes from the synthesis of three proven private industry standards: Lean, Six Sigma and Theory of Constraints.¹⁷ The Lean concept focuses on eliminating waste from the process, thereby minimizing resources while increasing workflow.¹⁸ Six Sigma is a system of eliminating errors through the creation of simple, repeatable processes.¹⁹ The Theory of Constraints focuses on removing barriers (internal or external) in order to increase production throughput.²⁰ Through a combination of these three principles, NAE created the AIRSpeed System that Current Readiness Cross Functional Team (CFT) uses. The

goal of AIRSpeed is that by optimizing the maintenance, supply and administrative actions the process will reduce the cost of Naval Aviation while meeting readiness requirements.²¹

Structure and Mission of NAE Current Readiness Cross Functional Team (CR CFT)

CR CFT uses DRRS principles of personnel, equipment supply, equipment condition and training as the baseline principles to improve a squadron's readiness. By using AIRSpeed, the CFT desires to streamline the readiness process in People, Equipment, Sustainment, Training and Ordnance (PESTO).²² The CR CFT consists of the Marine Aviation Executive Review Board, Executive Steering Committee, Readiness Leadership Team, and the Readiness, Standards and Policy Team.

Through the multi-year strategic vision plan developed by NAE, Current Readiness improves readiness by monitoring the key readiness metrics (See Figure 2). CR CFT attempts to achieve its goals of increased readiness through the continuous review of the key metrics. Since the metrics require deliverables (ACC/MCC/RBA/RFT to be discussed later) from all participants, it forces increased efficiency and more effective actions.²³ Through monitoring these metrics and maintaining the NAE Strategic Vision, CR CFT can leverage efforts across the PESTO spectrum.

When the Deputy Commandant of Aviation (DCA), Lieutenant General George J. Trautman III, decided in 2008 that NAE would become the process to manage all of the Marine Corps' aviation readiness, there was initial friction to changing the status quo among the squadrons. This friction was due to concerns that the consistent reporting of deliverables would create a situation where higher echelons would have excessive visibility of individual squadrons. Some commands were concerned that the exposure and full disclosure of their readiness shortfalls would result in excessive interference by their higher commands.

It is through transparency, though, that the process works since it allows operational commanders at all levels to hold their subordinate units accountable for the provided resources. The process also ensures that the support establishment is providing sufficient resources to meet readiness goals. Visibility of the squadrons ensures that their requirements are met and that they are efficiently using their assets. The key leadership roles played by wing and group commanders, who became stakeholders in the process, overcame the resistance to change as they began to implement the process.²⁴

CR CFT can create this level of detail due to the embedded Type/Model/Series (T/M/S) Teams. Each airframe in Naval Aviation has an associated T/M/S Team that has the knowledge and expertise to effect process change for their community. The team's goal is to identify and remove barriers from achieving efficient crew readiness, personnel manning and training, aircraft readiness and reduction of costs. By sharing information across the airframe communities, the T/M/S Teams can identify and implement the best practices.²⁵

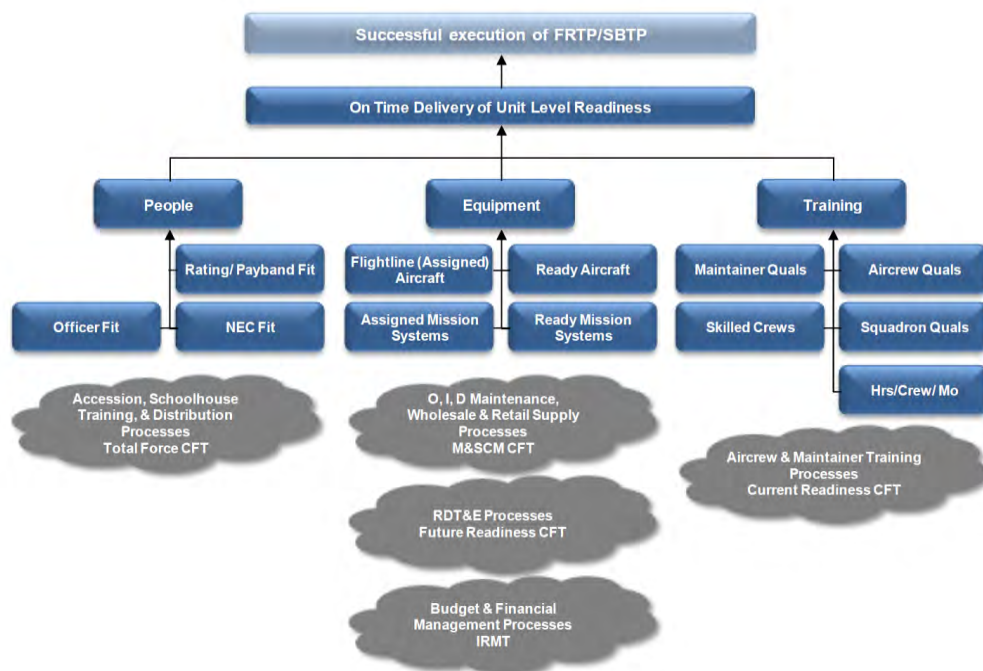

Figure 2: NAE Current Readiness Metrics²⁶

AH-1W Type/Model/Series Team

The AH-1W T/M/S Team consists of a core leadership group supported by an advisor and action officers (see Figure 3). The three members that make up the core leadership are the Marine Aircraft Group (MAG) 39 Commander as the AH-1W T/M/S lead, the MAG-29 Commander as the co-lead and Program Management Activity (PMA) 276 as the T/M/S PMA. As discussed earlier, the NAE process provides greater detailed information to the Group Commanders and allows them to make informed decisions on readiness priorities. Through the combination of their decades of experience with the AH-1W and the NAE process, they are able to use their expertise to improve AH-1W readiness with the assistance of the NAE advisor and action officers. The T/M/S Team meets at least twice a month to discuss current issues. Due to the consistent communication between the stakeholders, the AH-1W T/M/S Team can “execute a month to month analysis to make incremental improvements to best support the Marine Corps’ Requirements.”²⁷

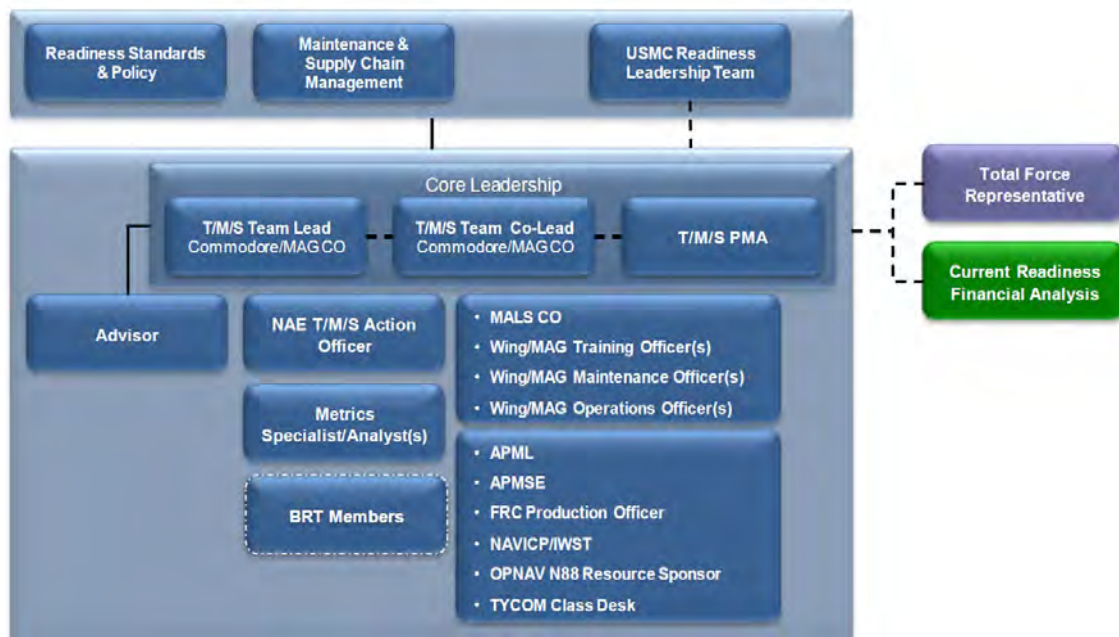

Figure 3: T/M/S Team Structure²⁸

Current Readiness Process

The Current Readiness Process assesses the readiness metrics, or Key Performance Indicators (KPIs), by developing a process map that visually displays which steps are quantifiable.²⁹ Through process mapping, CR CFT can improve readiness by analyzing how the current process works and find a way to streamline that process. The creation of a graphical representation “helps identify value-added and non-value-added activities, and process steps that include the input variables and the output variables.”³⁰ See Figure 4 for a process mapping system example. The Current Readiness Handbook outlines a seven-step process to map a workflow diagram. Refer to Appendix C for the process.

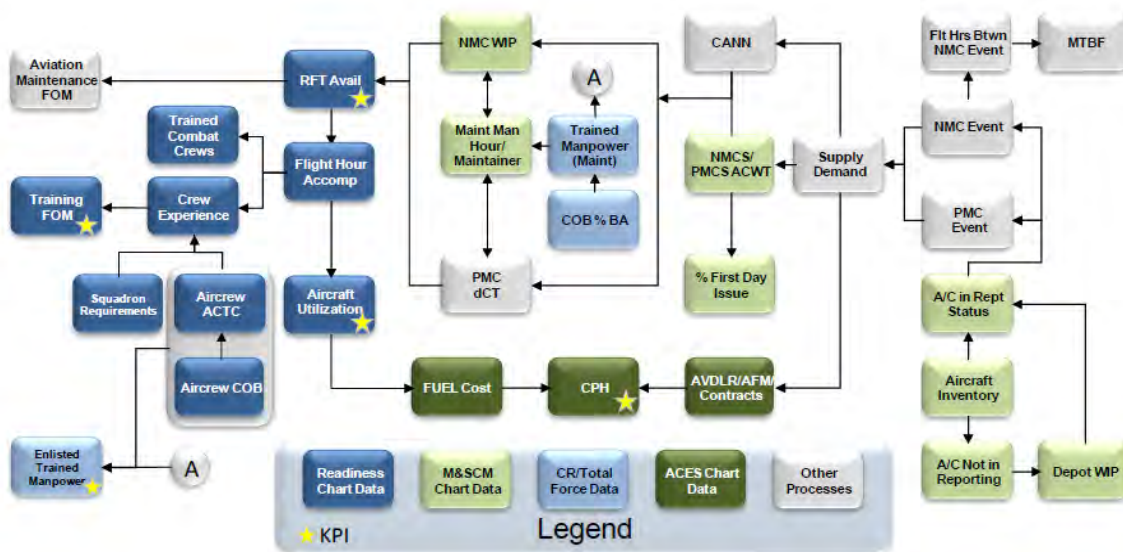

Figure 4: NAE CR Process Mapping System Example³¹

Current Readiness Standards

As discussed, prior to 2006 a single standard for aircraft readiness rates did not exist. What NAE created was a standard for each T/M/S that contained the required flight hours, equipment and personnel to achieve readiness in their METLs. The T/M/S Teams developed the

standards that became the foundation of the metrics.³² If a shortfall existed from the set standard, then that metric has a gap.

The AH-1W T/M/S Team monitors the eight active duty and one reserve squadrons for gaps and attempts to find ways to fix the shortfall, or “close the gap.” The three key areas that the T/M/S Teams monitor are maintainer readiness, aircraft readiness and aircrew readiness. The following discusses each of the three areas in more detail.

Maintainer Readiness

Maintainer readiness plays a critical role in a squadron’s overall readiness. Without the right maintainer with the required qualifications, aircraft readiness will fall. A squadron monitors their maintainer training and maintenance capability through a computerized system called Aviation Logistics Electronic Requirements Training System (ALERTS). The computerized database allows the user to see an instantaneous snapshot of the unit’s maintainer capability. The minimum goal for a squadron is to have sufficiently qualified maintainers to conduct dual shift/site maintenance. Whenever a gap exists, either in personnel or qualifications, it becomes the responsibility of the squadron maintenance officer to attempt to close the gap. Currently, the *COMNAVAIRFORINST 4790.2A Naval Aviation Maintenance Program* and *NAVMC 4790.01 Aviation Maintenance Training and Readiness Program* are the sources for maintainer training requirements. Additionally, an H-1 specific training and readiness (T&R) manual is forthcoming that will provide specific instruction and requirements to meet readiness standards.

Since the T/M/S Team has access to every squadron’s data, it enables readiness monitoring across the community. With this information, the T/M/S Team can assist the squadron maintenance officer in closing the gap. This assistance is especially critical when the gap is due to external reasons (i.e. manpower shortage, lack of school quotas, etc.). By knowing

each squadron's capabilities, the T/M/S Team works with the CR CFT and the Marine Corps leadership to shift resources to close the gap.

Aircraft Readiness

Aircraft availability is one of the KPIs that the T/M/S Team monitors. Instead of using the previous metric of FMC and MC to assess readiness, the CR CFT developed a new metric that provides increased clarity on aircraft readiness. The new metrics are Ready Basic Aircraft (RBA) and Ready For Tasking (RFT). An aircraft designated RBA has “the minimum configuration required to conduct day or night IMC [*Instrument Meteorological Conditions*] flight operations with necessary communications, IFF [*Identification, Friend or Foe*], navigations, flight and safety systems required by applicable NATOPS [*Naval Air Training and Operating Procedures Standardization*] and FAA [*Federal Aviation Administration*] regulations.”³³ RFT is “a calculated value based on the availability of ready basic aircraft, ready mission systems, and ready mission sets measured against standards.”³⁴

Each airframe has a defined number of RBA that are capable of executing a specific mission set based upon their operational equipment. For example, a Light Attack Helicopter Squadron is assigned 18 AH-1Ws, of those an average of 13.5 aircraft should be RBA (or 75% of their assigned). Within those 13.5 RBA aircraft, eight should have a fully functional precision guided missile system. Refer to Appendix D for the complete AH-1W standards.

When a squadron fails to meet the standards, NAE defines the shortfall as a gap. The T/M/S Team then assesses whether the maintenance problem is isolated to a single unit or has become a fleet-wide degrader. If the problem is isolated, the T/M/S Team can assist in additional training or resources to address the problem. If the issue is wide spread, the T/M/S Team uses the CFT to address the issue at the appropriate level.

Aircrew Readiness

As aircraft readiness relies upon maintainer readiness, aircrew readiness relies both upon maintainer and aircraft readiness. A squadron is unable to sustain, let alone improve, aircrew readiness if there are insufficient aircraft available. Similar to the maintenance system, squadrons and NAE monitor aircrew readiness through a computerized system called Marine Sierra Hotel Aircrew Readiness Program (M-SHARP). This database allows the user to capture a unit's aircrew readiness at anytime. Each assigned Mission Essential Task (MET) has a specified requirement for current and proficient aircrew.

For AH-1W aircrew two documents drive the readiness requirements, *NAVMC 3500.14 Aviation Training and Readiness Program Manual* and *NAVMC 3500.49 AH-1W Training and Readiness Manual*. The Marine Corps assigned AH-1W pilots eight core METs:³⁵

- Conduct Aviation Operations From Expeditionary Shore-Based Sites
- Conduct Close Air Support
- Conduct Air Interdiction
- Conduct Armed Reconnaissance
- Conduct Strike Coordination and Reconnaissance
- Conduct Forward Air Control (Airborne)
- Conduct Aerial Escort
- Conduct Aviation Support of Tactical Recovery of Aircraft and Personnel

Training and Education Command (TECOM) designates a specific number of crew required to be proficient in these METs. It is from these numbers, or Core Model Minimum Requirement, that a squadron's aircrew readiness numbers are compared against.

AH-1W Analysis

The next section provides an AH-1W process mapping example, discusses how maintainer and aircrew readiness was monitored prior to NAE, what changes have been instituted and cites specific examples of how NAE has assisted the fleet. This section also

provides quantitative analysis and qualitative assessment of aircraft readiness over the last ten years.

AH-1W Process Mapping Example

The AH-1W T/M/S Team used process mapping to solve an aircraft readiness problem. At one of their bi-monthly meetings, the team discovered a developing trend of MC aircraft that were not RBA. This issue was due to aircraft that were ready for a post-maintenance check flight, but had not completed the testing. With process mapping, the team discovered that the squadrons were significantly short on Vibration Analysis Support Equipment (VASE) test sets. The VASE 8500 test sets are required items anytime a squadron replaces a rotational component as it verifies that the replaced components are operating at the correct specifications.

While squadrons had several VASE 8500 sets assigned to them, usually only one or two of the test sets were functional. Typically, a squadron would have multiple aircraft ready for test each day, but were unable to conduct the check flight due to only one functional test set. Since the AH-1W T/M/S Team includes PMA-276, who is responsible for funding the AH-1W program, the team was able to acquire funding to order additional sets. Additionally, the team expanded the repair facility capabilities, which resulted in a decreased wait time for test set repair time. By using process mapping, the AH-1W T/M/S Team identified a problem and found a viable solution that had a direct effect on aircraft readiness.³⁶

Maintainer Core Competency

Before NAE instituted the use of ALERTS, a squadron would rely on paper training jackets and a squadron-generated spreadsheet to track their maintainer qualifications. This process relied heavily on the maintenance officer and maintenance chief to monitor their maintenance capability vigilantly. Normally, when a squadron faced an upcoming deployment,

the maintenance chief would create a roster based upon recommendations of the division's staff non-commissioned officers. This roster would usually not have the required maintainer qualifications (e.g. crane operator, ground support equipment (GSE) licensing, etc.) to meet the deployment requirements. With the advent of ALERTS, a squadron is now capable of having real-time information of every qualification it currently possesses. If there is a shortfall, it becomes easily identifiable and allows the squadron to focus their efforts. Additionally at the MAG level, it provides the commanders the visibility to adjust personnel across their squadrons to close any gaps that exist.

An example of how NAE has assisted the fleet's maintainer readiness comes from the reserve squadron's trend of a GSE driver shortfall. The T/M/S Team recognized the shortfall, which reduced the maintenance capability of the squadron, and developed a solution. Every year, the three reserve detachments spread between Pennsylvania, Georgia, and Louisiana, consolidate at Twentynine Palms, California to conduct a training exercise. The AH-1W T/M/S Team established a training plan that allowed the reserve maintainers to receive the required training at Camp Pendleton during the exercise. The effect was two-fold; first, the training directly increased the maintainer readiness of the squadron and second it reduced cost as the unit had already travelled to California.³⁷

The transparency of the process provides all users, from the maintenance chief to the DCA, to rapidly identify and solve problems. When issues cannot be solved at their level, it also allows an effective escalation of the problem so that it can be solved. The efficiency of the system has created an environment where maintainer qualification gaps are rapidly decreasing. Fleet-wide, there are 3,000 maintainer qualifications required to sustain competency for the HMLAs. Currently, the squadrons possess over 10,000 qualifications, over a three-fold increase

of the requirements. Maintainer readiness is positioned for success, since if a squadron is short on qualifications, a MAG Commander has the visibility to transfer personnel in order to meet the requirements.³⁸

Aircraft Readiness

As discussed earlier, the problem with aircraft readiness was a lack of standardized metrics to assess true readiness rates. Due to the lack of the defined metrics, squadrons would attempt to have every aircraft in an FMC state. Since the squadrons did not possess the required parts supply and manpower, this endeavor resulted in wasted efforts towards an unfeasible goal. Through NAE's creation of the RBA and RFT standards, it allowed a squadron to focus on meeting specific and realistic goals.

The AH-1W T/M/S Team provided the data used in the following discussion and is included in Appendix E. The readiness data only includes the eight active duty and one reserve squadrons. An exclusion of the supporting training and testing squadrons allows the focus of analysis to be on the operational fleet squadrons. The Mission Capable column contains the aggregate mission capable rates of the squadrons. The Total Flight Hours column lists the yearly total number of hours flown by the squadrons. The Average Aircraft Assigned contains the average number of aircraft available to the squadrons. The Average Hours per Aircraft column divides the total flight hours by the average assigned aircraft.

An initial look at Table 1 would indicate no improvement to the AH-1W mission capable rates, as the 2003 MC rates were at 71.9% and the 2011 MC rates were at 71.0%. Additionally, there appears to be a decrease in rates from 2008 (78.4%), when the AH-1W T/M/S Team stood up, to 2011 (71.0%). Several reasons contribute to the apparent decrease in aircraft readiness,

with the main reason due to an increase in total flight hours combined with a decrease in the total number of aircraft available.

Table 1: AH-1W Mission Capable Rates 2001-2011

Year	AH-1W Average Mission Capable (Fleet and Reserve Squadrons)	Total Flight Hours	Average Aircraft Assigned (Fleet and Reserve Squadrons)	Average Hours per Aircraft (Fleet and Reserve Squadrons)
2001	75.0%	29,395	133	221.4
2002	72.1%	28,994	134	216.0
2003	71.9%	23,333	134	174.1
2004	73.8%	32,687	132	247.5
2005	76.7%	37,382	129	290.8
2006	78.2%	36,647	129	283.0
2007	76.5%	37,138	133	280.3
2008	78.4%	31,850	124	257.0
2009	73.6%	31,275	118	264.0
2010	70.4%	33,797	112	303.1
2011	71.0%	37,290	104	357.5

From 2008 to 2011, there was a 17% increase in total flight hours with a 16% decrease of available aircraft, which caused a 40% increase in flight hours per airframe. In 2011, each airframe flew on average 357.5 hours per year, vice the 257.0 hours per year they averaged in 2003. By looking at the longer term data from 2003 to 2011 (with similar MC rates), there is a 59.8% increase of total flight hours with a 22.4% decrease in available aircraft which resulted in over a 105% increase of flight hours per airframe. See Figures 5 through 7 for a graphical depiction of the trend.

Between 2003 and 2009, the increase in flight hours was primarily due to dual support of Operations IRAQI FREEDOM and ENDURING FREEDOM. Upon completion of the mission in Iraq in 2009, HMLAs increased their support to Afghanistan. Further contributing to higher flight hours after the Iraq drawdown was the addition of two HMLA squadrons, HMLA-467 in 2008 and HMLA-469 in 2009.

With nine squadrons, that are each authorized 18 AH-1Ws, the Marine Corps is allowed 162 airframes for the operational squadrons. However, there are not sufficient aircraft available to assign each squadron their full authorization. Only deploying squadrons receive their full allotment of aircraft and non-deploying squadrons operate with fewer aircraft. This reduction in available aircraft is the result of required depot level maintenance, remanufacturing AH-1Ws into AH-1Zs and airframe attrition due to mishaps. This trend will continue downward until 2014 when the deficit begins recovering due to an increase in AH-1Z remanufacturing.³⁹

A future reduction in total flight hours is not likely as TECOM forecasts a baseline peacetime requirement of 29,700 flight hours in order to maintain a T-2 level for the eight active duty and one reserve squadrons. However, with two squadrons deploying to Afghanistan each year and three to four Marine Expeditionary Units detachments deploying each year, the forecast rises to 31,632 flight hours to accommodate their T-1 requirement.⁴⁰

One example of how AH-1W T/M/S Team assisted in increasing aircraft readiness was when they noticed a trend of the AH-1Ws based in Okinawa consistently reported lower than average readiness rates. Through an analysis, they recognized that those aircraft had not received limited depot level maintenance. Working with PMA, they orchestrated a wholesale swap of aircraft with improved maintenance timelines and immediately increased the detachment's readiness.

A final example of how the team improved readiness rates was through their work with PMA-276 and the U.S. Naval Supply Systems Command. The AH-1W T/M/S Team was able to increase the replacement time for a key component from 900 to 2800 hours. By more than tripling the usable life cycle of a key component, they were able to decrease the maintenance workload and increase the squadron's readiness rates.⁴¹

Figure 5: AH-1W Average Mission Capable (Fleet and Reserve Squadrons) 2001-2011

Figure 6: Average Aircraft Assigned (Fleet and Reserve Squadrons) 2001-2011

Figure 7: Average Hours per Aircraft (Fleet and Reserve Squadrons) 2001-2011

The biggest take away from the aircraft readiness analysis is that the AH-1W is currently maintaining similar readiness rates as in 2003 but has executed 59.8% more flight hours with 22.4% less aircraft available. The higher aircraft utilization rate will remain and will continue to stress the AH-1W airframe until the AH-1Z transition is completed. Without a well-informed process in place, readiness numbers are likely to decrease. NAE, and the AIRSpeed system, are capable of managing the process to ensure continued AH-1W readiness.

Aircrew Core Competency

As with maintainer readiness, a squadron typically tracked aircrew readiness through paper training jackets and a squadron-generated spreadsheet prior to the mandated use of M-SHARP. Squadrons characteristically inflated their readiness numbers, as it was difficult to track currency for a specific event. Each flight has a specified interval in the T&R that a pilot must fly in order to maintain currency for that event. Without a computer database that automatically

tracks and updates a pilot's currency, the data is subject to human error. M-SHARP resolved the issue of inconsistent data and increased visibility of the fleet's true readiness.

TECOM released a new AH-1W T&R Manual on 8 March 2011. The new manual, while directly aligning with the squadrons' METs, it also increased the required flight hours to maintain proficiency. Increased flight hour requirements with reduced aircraft availability will continue the trend of high aircraft utilization. Since the new T&R was a significant change in training requirements from the previous version, any long-term trend is difficult to distinguish. However, as shown in Figure 8, on average six of the eight active duty squadrons are maintaining a T-Rating of T-2 or higher.

The AH-1W T/M/S Team did not provide any specific examples of how NAE has directly increased aircrew readiness. However, as part of the AH-1W T/M/S Team, MAG commanders are armed with the information they need to assist in improving their squadron's readiness. The commander can identify where the squadron has a shortfall and assist through a transfer of personnel or provide opportunities for additional training.

Figure 8: AH-1W T-Rating 2011⁴²

Future of the AH-1W

As the AH-1W approaches the end of its service life in 2020, and the AH-1Z comes online, funding will decrease to cover only safety-related issues.⁴³ This “sundown” is similar to what the Marine Corps is currently experiencing with both the CH-46E and the UH-1N. During the time of transition, it becomes imperative that the AH-1W remains a ready asset and does not go limping into irrelevance. The AH-1W T/M/S Team is responsible for facilitating the transition and is able to assist due to the visibility that the NAE process instills. Additionally, they will hold both the operators in the squadrons and the providers in the headquarters accountable. The T/M/S Team can ensure that service providers meet the operational requirements and the squadrons are efficiently using the provided assets.⁴⁴

Since the AH-1Z will not be fully operational capable until 2020, the AH-1W will continue, for at least the next five years, to be the Marine Corps’ primary force provider for rotary wing close air support. Upgrades to the Night Targeting System, Digital Video Recorder, Tactical Video Data Link and the 20mm Linkless Feed System will ensure that the AH-1W maintains a viable war fighting capability.⁴⁵ With the AH-1W T/M/S Team’s cross functional structure, they are in a position to maintain both the AH-1W’s readiness and relevance.

Conclusion

Prior to NAE management of AH-1W readiness, a disjointed effort to increase readiness existed. By incorporating maintainer, aircraft and aircrew readiness with the supporting establishment into a process managed by the stakeholders, NAE created a holistic process that has a positive effect on AH-1W readiness. Through inherent transparency, leaders can make well-informed decisions with direct effects. Reduced aircraft availability and budget combined with increased readiness requirements, the Marine Corps will continue to rely on NAE to

manage its aviation readiness. The AH-1W's future budget relies on the readiness reporting from DRRS. Without accurate maintainer, aircraft and aircrew readiness provided in DRRS reporting, the AH-1W will not receive the correct funding. The manpower and budget spent on NAE is a solid investment. Similar to the industry practices it is derived from, the process is not perfect, but NAE strives to make continuous incremental improvement in performance.

AH-1W
TYPE EQUIPMENT CODE: AHAX

Do not assign an EOC code if all equipment is operational. The aircraft is FMC.

Assign alpha character (C) of the EOC code when the following systems are inoperative. The aircraft is either not capable of safe movement on shore or off ship during day, night, and inclement weather conditions, or operating in extreme weather conditions. The aircraft is PMC, M or S.

ARC-210 (2 REQUIRED)	
ENVIRONMENTAL CONTROL UNIT	
ENGINE ANTI-ICE	
INLET HEATER	
NVG AND OVERT FORM LIGHTS	(NOTE 8/9)
NVG HUD	(NOTE 8)
PITOT HEATER	
PRESSURE REFUELING SYSTEM	(NOTE 12)
RAIN REMOVAL SYSTEM	
ROTOR BRAKE	(NOTE 12)
TIE DOWN FITTINGS/TOW RINGS	(NOTE 12)

Assign alpha character (D) of the EOC code when the following systems are inoperative preventing the utilization of Aircraft Survivability Equipment or performing encrypted radio transmission. The aircraft is not capable of performing tactical missions in a combat environment. The aircraft is PMC, M or S.

COUNTERMEASURE DISPENSING SYSTEM (ALE-47)	(NOTE 13)
IFF MODE 1, 2, 4	(NOTE 13)
IR JAMMER (ALQ-144)	(NOTE 13)
MISSILE/LASER WARNING SYSTEM (AAR-47)	(NOTE 13)
RADAR WARNING SET (APR-39)	(NOTE 13)
SEAT ARMOR	
SECURE UHF (KY-58)	(NOTE 13)

Assign alpha character (E) of the EOC code when the following system is inoperative, preventing the expanded mobility mission. The aircraft is not capable of conducting missions requiring extended ranges. The aircraft is PMC, M or S.

AUXILIARY FUEL SYSTEM

Assign alpha character (F) of the EOC code when the following systems are inoperative, the aircraft is not capable of operating the Targeting System. The aircraft is PMC, M or S.

Enclosure (1)

P Level				
Rule	P1	P2	P3	P4
Personnel Strength	>= 90%	80-89%	70-79%	<70%
MOS Fill	>= 85%	75-84%	65-74%	<65%
T Level				
Rule	T1	T2	T3	T4
Percentage of Core METs Trained to Standard	>=85%	70-84%	55-69%	<55%
S Level				
Rule	S1	S2	S3	S4
Mission Essential Equipment Total Service-selected mission essential equipment possessed divided by prescribed wartime requirements	>= 90%	80-89%	60-79%	<60%
Total In Reporting Status aircraft possessed divided by prescribed wartime requirement	>= 90%	80-89%	60-79%	<60%
Support Equipment Total Service-selected principal end-items possessed divided by prescribed wartime requirement	>= 90%	80-89%	60-79%	<60%
R Level				
Rule	R1	R2	R3	R4
Mission Essential Equipment Total Service-selected mission-essential equipment available and "mission capable" divided by total possessed	>= 90%	70-89%	60-69%	<60%
Total In Reporting Status aircraft mission capable divided by total aircraft In Reporting Status	>= 75%	60-74%	50-59%	<50%
Principal End Item Total Service-selected end-items available and mission capable divided by the total possessed	>= 90%	70-89%	60-69%	<60%

Appendix C

- Step 1: Determine, and state in writing, the Scope and Boundaries of the Process Map
 - *Pick a logical entry and exit point for the process.*
 - *The scope of the Process will determine the steps to include and to what level of detail.*
- Step 2: List the Steps
 - *Describe the individual elements or steps within the Process.*
 - *Elements or steps in the process may include several Sub-Processes. It may be necessary to combine or break-out Sub-Processes depending on the scope of the Process.*
- Step 3: Sequence the Steps
 - *Use a method to display the individual steps.*
 - *Order the steps in a logical manner.*
 - *Do not draw arrows until later.*
 - *The flowchart can either show the sufficient information to understand the general process flow or detail every finite action and decision point.*
- Step 4: Build the System Model
 - *Connect the steps using arrows to show Process flow.*
- Step 5: Check for Completeness
 - *Review the Process to ensure all steps are accounted for.*
- Step 6: Finalize the Flowchart
 - *Ask if this process is being run the way it should be.*
 - *Do we have a consensus?*
 - *What is redundant; add what is missing.*
- Step 7: Identify Key Processes and Supporting Processes (Key Performance Indicators/Drill-down Metrics)
